

SMART Integrated Circuit Design and Methodology

Editors:

Thomas Noulis, Aristotle University of Thessaloniki, Greece
 Costas Psychalinos, University of Patras, Greece
 Alkis Hatzopoulos, Aristotle University of Thessaloniki, Greece

This book describes advanced flows and methodologies for the design and implementation of system-on-chip (SoC). It is written by a mixture of industrial experts and key academic professors and researchers. The intended audience is not only students but also engineers with system-on-chip and semiconductor background currently working in the semiconductor industry.

Integrated Circuits are available in every electronic product, especially in emerging market segments such as 5G mobile communications, autonomous driving, fully electrified vehicles, and artificial intelligence. These product types require real-time processing at billions of operations per second. The development design cycle time is driving costs and time to market more than ever before. The traditional design methodologies have reached their limits and innovative solutions are essential to serve the emerging SoC design challenges. In the framework of the Circuit and System Society (CASS) Outreach Initiative 2022 call, the SMART Integrated Circuits design methodology – named SMARTIC – Seasonal School was performed in November 2022, in Thessaloniki (Greece).

Features

- Core analog circuits of any system of chip, such as high-performance rectifiers and filters, are addressed in detail, together with their respective design methodology.
- New advanced methodologies towards design cycle speed up based on machine learning and artificial intelligence applications.
- Advanced analog design methodology based on gm/Id and lock up tables. A powerful flow for enabling fast time to market analog circuit design focusing on baseband circuits
- More exotic methodologies and applications with focus on digital-based analog processing in nanoscale CMOS ICs and the design and development of depleted monolithic active pixel sensors for high-radiation applications, together with all the respective challenges of this application.

TABLE OF CONTENTS

1. On the Realization of High Accuracy Rectifiers Based on Modern Active Elements
2. Analog Integrated Filters Design Methodology
3. Circuits and Systems for Machine Learning and Artificial Intelligence Applications
4. Machine Learning Classification on Printed Circuits
5. The Analog Designer's Toolbox (ADT) Towards a New Paradigm for Analog IC Design
6. Digital-based Analog Processing for the IoT
7. Design and Development of Depleted Monolithic Active Pixel Sensors for High-Radiation Applications
8. Why is a Verification Engineer the Most Wanted Person these Days?

River Publishers Series in Electronic Materials, Circuits and Devices

ISBN: 9788770228336

e-ISBN: 9788770228688

Available From: June 2023

Price: € 104.50 \$ 130.00

KEYWORDS:

Custom IC Design, Design cycle speed Up, Machine Learning, Acceleration, Analog Circuits
