

Advances in Aerospace Technologies

Editors:

Devabrata Sahoo, Graphic Era (Deemed to be University), Dehradun, India

Abhishek Sharma, Graphic era University, India

Shailendra Rajput, Xi'an International University, China

This book features the recent technological advances made in the broad domain of aerospace engineering. Aerospace engineering covers a wide range of areas on which research is being done, including subsonic aerodynamics, high speed aerodynamics, unsteady aerodynamics, wind tunnel testing, computational fluid dynamics, and more.

The authors also review recent technological advancements done in aerospace engineering and provide information about all the important domains and problems of interest in the field. The various important problem areas covered within the book include satellites, supersonic/hypersonic inlets, advanced composite structures, spiked bodies, delta wings, green propellant, satellite designing, satellite trajectory control, industry 4.0 in aerospace etc. In addition, the advancements done in the areas of introducing artificial intelligence in to the aerospace domain is also covered.

TABLE OF CONTENTS

2 Modelling and Analysis of Advanced Composite Structures: Functionally Graded Structures

3 Detailed Study of Delta Wing Aerodynamics

5 A Study of Different Techniques for Reducing Drag and Heating Problems on a Blunt Body at Supersonic and Hypersonic Speed

6 Industry 4.0 in the Aerospace Domain

8 Experimental and Numerical Investigations on Supersonic Intake Buzz: A Survey

9 Application of an Artificial Intelligence System in the Aerospace Area

Editors:

Devabrata Sahoo

Abhishek Sharma

Shailendra Rajput

River Publishers Series in Communications and Networking

ISBN: 9788770041492

e-ISBN: 9788770041195

Available From: October 2024

Price: \$ 140.00

KEYWORDS:

Satellite, delta wings, supersonic inlets, green propellants, Industry 4.0, artificial intelligence
